

**ASU Department of Psychology
Clinical Program**

Child Clinical Faculty

Clinical Faculty	Research Area/Interests
Dr. Laurie Chassin	Adolescent risk behaviors and mental health, adolescent substance abuse, developmental psychopathology.
Dr. Lauren Friedman	Examining the cognitive processes contributing to the core symptoms and functional deficits associated with ADHD through both experimental and meta-analytic techniques.
Dr. Nancy A. Gonzales	Cultural and community influences on Mexican and Mexican American family processes and adolescent development; Prevention of school dropout and mental health problems in low income communities; cultural adaptation of prevention and treatment interventions.
Dr. Linda Luecken	Biopsychosocial processes by which mothers and infants co-regulate each other's emotions, behavior, and physiology.
Dr. Rick Cruz	The intersections between culture and context (e.g., family, neighborhood) in youth adjustment, with a focus on substance use and mental health.
Dr. Marisol Perez	Assessment and prevention of eating disorders and obesity for ethnic minorities, often using a focus on Latino populations; cultural sensitivities of diagnostic criteria and creating a definition for recovery; and intergenerational transmission of eating habits and psychopathology.
Dr. Sharlene Wolchik	Development and evaluation of preventive interventions for at-risk children; long-term effects of preventive interventions for children who have experienced parental divorce or parental bereavement
Dr. Abigail Gewirtz	Preventive interventions to strengthen families affected by traumatic stressors. With her research team, she develops, tests and examines the widespread implementation of parenting interventions for diverse families including military families exposed to parental deployment to war, and those affected by forced migration due to war or sociopolitical violence, among others.

Affiliated Faculty	Area	Health-Related Research
Dr. Leah Doane	Developmental	Daily stress experiences in adolescence and young adulthood, ecological momentary assessment of emotions and physiological stress activity, social-emotional influences on trajectories of physical and mental health over the transition to adulthood.
Dr. Nancy Eisenberg	Developmental	Social and emotional development, including emotion regulation, emotional development, adjustment and social competence, and moral development.
Dr. William Fabricius	Developmental	Development of metacognition and problem solving.
Dr. George Knight (Emeritus)	Social, Quantitative	Acculturation and enculturation, Measurement and methodological issues in minority mental health research, Prosocial behavior.
Dr. Kathryn S. Lemery	Developmental	Developmental behavior genetic approach; Individual differences in appropriate and inappropriate emotional responding-including temperament, internalizing, externalizing, and attentional disorders; Risk and resiliency; Parent and sibling influences.
Dr. Armando Piña	Developmental	Development of anxiety disorders in children, treatment of childhood anxiety, Latino families
Dr. Clark Presson	Cognitive Science	Addictive behaviors, adolescent cigarette smoking; spatial reasoning
